RE: Test Test6, 1950/01/01, 11111111117

RE: Patient will no longer be recalled for further screening by the Breast Screening Program

Based on information provided to the program, this patient will no longer be recalled by the program for breast screening due to the following reason(s):

MEDICALLY UNFIT

The patient was determined to be medically unfit for breast screening. Given the physical limitations of your patient, local diagnostic imaging services such as ultrasound (which would require a requisition) may better serve their breast imaging needs in the future, as there is typically greater flexibility in appointment time and availability of additional staff. Patient safety and image quality remain our primary considerations in the Breast Screening Program.

Please note: Should a breast screening test be received by the Breast Screening Program in the future, reminder notifications will automatically recommence should the recommendation received from the radiology report indicate your patient is cleared to return to screening.

If the above information is inaccurate or you are able to provide valid patient contact information, please fax the program at 1-604-877-6113 to request re-activation of this patient in the program.
